Good morning! Here's your coding interview problem for today.

This problem was recently asked by Google.

Given a list of numbers and a number $\lfloor k \rfloor$, return whether any two numbers from the list add up to $\lfloor k \rfloor$.

For example, given [10, 15, 3, 7] and [k] of [17], return true since [10 + 7] is [17].

Bonus: Can you do this in one pass?
